The Royal Environmental Health Institute of Scotland

CoffeeSafe was recently approached by The Royal Environmental Health Institute of Scotland (REHIS), with a request to provide their members specialised training on the Pressure Systems Safety Regulations (PSSR), in particular how it applies to Users and Owners of coffee machines.

This invitation was greatly welcomed and began with an in person training session hosted at Angus Council in late August. This will be followed by more online training in mid September.

The UK coffee industry continues to grow rapidly and reach into new markets, so raising awareness on the key safety considerations to ensure steam generating coffee machines are suitably maintained and examined at set frequencies in accordance with a Written Scheme of Examination is essential.

The witnessed enthusiasm and drive by the officers in attendance to understand and debate PSSR awareness and enforcement will undoubtedly improve safety in the hospitality market within Scotland.

Subsequent requests for in person training have been scheduled to be hosted at Stirling Council with neighbouring Falkirk and Clackmannanshire in attendance.

"The Royal Environmental Health Institute of Scotland, often referred to as REHIS, was established in 1983. The Institute was incorporated by the Royal Charter in 2001.

The Institute awards the qualification which allows a person to practice as an Environmental Health Officer (EHO) in Scotland. Under the Royal Charter and Scheme of Continuing Professional Development it awards Chartered Environmental Health Officer status to eligible members.

The Institute is a long established awarding body in Scotland for a variety of REHIS qualifications many of which have been independently credit rated on the Scottish Credit and Qualifications Framework (SCQF).

The Institute is a founding Member of the International Federation of Environmental Health."

L.E.A Coffee Machine Safety Discussion and PSSR Awareness Training

CoffeeSafe would also like to thank Great Yarmouth Borough Council for hosting a safety training and discussion session, focusing on coffee machines involvement with the Pressure Systems Safety Regulations (PSSR).

We also had environmental health officers representing South - West - North Norfolk, Norwich and Breckland Councils joining us.

This was a welcome opportunity to discuss the importance of raising safety awareness in this area as many users and owners of coffee machines are not aware of the risk the machines pose as a pressure system.

Compliance with PSSR is a legal requirement and vastly reduces the dangers associated with operating pressure systems in work and public environments.

We are continuing to roll these CPD (Continuing Professional Development) awareness training sessions out to Councils on request nationwide. Please don't hesitate to contact us if you would like to know more.

Audits with CoffeeSafe

Quality assurance safety audits carried out with CoffeeSafe ensure coffee machine pressure system examinations are carried out in an objective, thorough and professional manner.

These audits are a great opportunity to share best practice, knowledge and promote high quality safety assessments.
